

A safer and better world

## The Resilience Shift

We are a global initiative to catalyse resilience within and between critical infrastructure sectors.

# Our vision

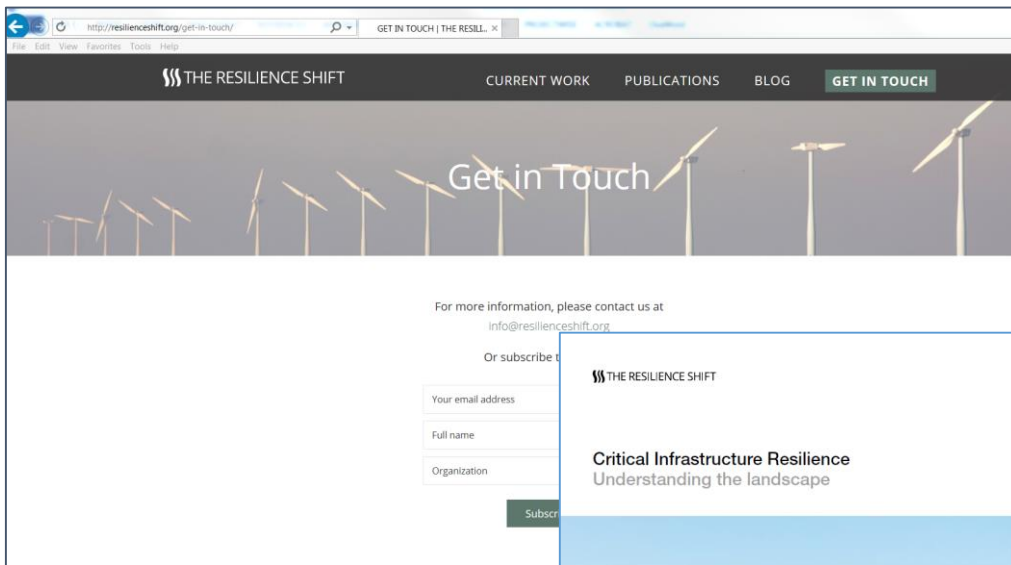

The Resilience Shift aims to make critical infrastructure not only safer but also better.

- Professionals will make decisions all along the value chain/project life cycle that account for how critical infrastructure contributes to the resilience of the larger social-technical-ecological system
- Engineered structures and infrastructure will be planned, designed, delivered and operated to serve the communities (provide, protect, and/or connect), under ordinary and extraordinary circumstances.

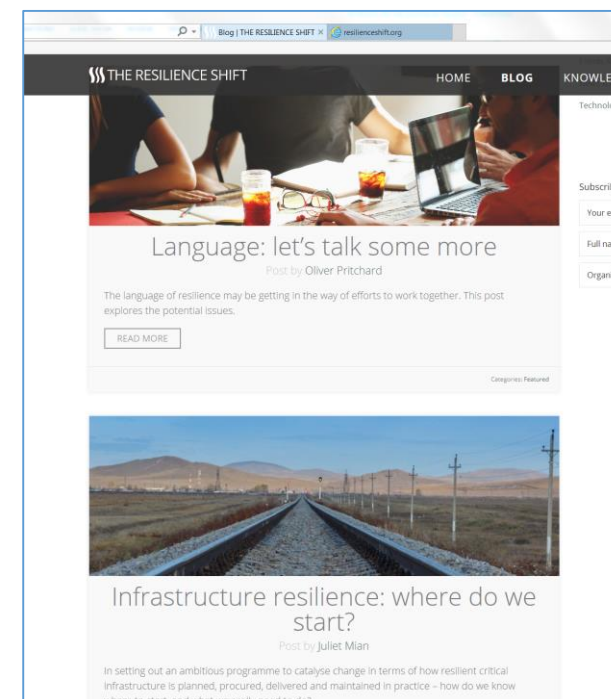

# Our work streams

Our work is currently focusing on the following three work streams; the bridge between our vision and aspirations and our detailed projects and investments:

- Improve what we know about **how to deliver resilience** – making resilience tangible, practical and relevant.
- Illuminate **how we value resilience** to get incentives right for resilience across the value chain.
- Show us **how to scale-up resilience practices**; how to make resilience practice business as usual within and between critical infrastructure sectors.
